

Renewable Solar Energy & Agricultural

As an Agricultural Producer or Rural Small Business in Colorado or nearby, are you interested in *saving money on your energy costs, and producing clean renewable energy at the same time?*

Now is the time to consider installing a Solar Electric (PV) system at your farm or residence. These are the current programs that can help make owning and installing a solar system extremely affordable:

- Federal Rural Energy for America Program (REAP) Grant- *application deadline 6.15.11*
- U.S. Department of Treasury Renewable Energy Grant
- Federal Business Energy Investment Tax Credit (ITC)
- Xcel Energy Solar Rewards Program

What if I'm interested in Solar energy but don't like the idea of paying thousands of dollars to get a system installed?

Perhaps the idea of a large initial investment has prevented you from seriously considering a Solar PV system. Our **SolarSaver** financing program offers two unique methods for making solar energy accessible to qualified customers:

- **Power Purchase Agreement (PPA):** Fix your electrical rate at or below your current utility rate for the life of your system, and pay only for the power your system produces.
- **Solar Saver Lease:** Fix the cost of your solar energy payments into one fixed price in a monthly lease. Your solar energy costs will never change no matter how much solar energy you consume.

How do I get started?

- Schedule a free solar consultation today. One of our technical sales engineers will come do an on-site evaluation of your property.
- We will custom design your solar system at no charge and create a complete proposal including renderings of the system and financial analysis of the cost benefits to you.

If you have any questions or comments, or would simply like to learn more about the benefits of solar energy and how you can realize these benefits, please visit www.Lighthousesolar.com or contact us directly. We encourage you to be part of the solution!
